

Stat 201 - Generalized Linear Models**Optional Assignment**

1. Review the R codes presented during this week (look in the directory **R material**).
2. Load the dataset **hiroshima** from the library **Dobson** and do exercise 7.1 in the book. Propose a reasonable model by trying different link functions and including covariates with and without interactions.
3. Load the dataset **graduates** from the library **Dobson**. There are missing values in this dataset and they are indicated by an asterisk. Replace them with NA and proceed. Using a battery of logit regression models, answer the questions of exercise 7.3 in the book.
